“New ZM-408-HP ZIM-MIXER in Australia”

May saw the delivery of yet another US Zimmerman volumetric mixer into Australia.

Darryl & Melissa Borrett from Coober Pedy Outback Concrete Supply were onsite in the remote opal mining town of Coober Pedy South Australia with Bruce (CESA) and Gil (Zimmerman USA) to commission the new truck mounted volumetric mixer.

The volumetric mixer allows the operator to drive to the customer's site location and delivery preset slump specific cement in the volumes requirements. Darryl or the customer is able to supply their own specified aggregate & sand. This equipment has proved extremely successful in the mining & domestic markets of remote areas of Australia.

Do you currently use the Pump Safe Australia LOG BOOK for boom & line pumps? These books are available for purchase from our office. There are two types of books, the OFFICE COPY which is valid for 6 years and the pump / OPERATOR'S COPY which is valid for 12 months. Each pump should have it's own OPERATOR'S LOG BOOK. The pump log, designed to be kept in the truck, is a record of main components, daily, weekly & monthly checks, monthly pipe thickness checks, 12 month pump check, master inspection report and pump repair record sheet. It is a full audit trail of all maintenance performed and can be a valuable asset when it comes time to on sell your equipment.

Are your pump pipes too thin? CESA now provides an ultrasonic thickness testing service. We ask you phone prior to attending our factory for this service. Alternatively you may prefer to perform your own testing by purchasing one of our hand held microprocessors (Digital Ultrasonic Thickness Gauge TT1100)

Danger

Ultrasonic Thickness Gauge

Are your concrete pump pipes getting thin?

\$1037.00 + GST

The TT1100 is a hand held microprocessor controlled gauge specifically designed for measuring the thickness of metallic & non-metallic materials (aluminium, titanium, plastic, ceramic, glass) - top & bottom surfaces must be parallel
